- **Conclusions**

INTRODUCTION

What can be articulated as metadata?

- Metadata are information that are describing, explaining, locating, make easier accessible, used or maintained data resource.
- Term metadata are used with different meanings in different groups and branches, but two are mostly articulated:
 - metadata are standardized, structured information that machines can interpret and use,
 - metadata is record to describe a resource .

Terms and Definitions

- **metadata:** information describing spatial data sets and spatial data services and making it possible to discover, inventory and use them [INSPIRE Directive]
(metadata: data about data [ISO])
- **metadata element:** means a discrete unit of metadata, in accordance with EN ISO 19115
- **data set:** identifiable collection of data [ISO 19115]
- **spatial data set series:** collection of data sets sharing the same product specification [ISO 19115]

Metadata are describing the data and they have to answer on questions related to data:

- Who created the data?
- What is the content of the data?
- When was the data created and updated?
- Where are the data in space?
- How was the data developed?
- Why was the data developed?
- What data are accessible?
- What is the quality of data?
- How is distribution of data made?
- ...

Metadata Documents

VLADA REPUBLIKE HRVATSKE

2794

Na temelju članka 90. stavka 2. Zakona o državnoj izmjeni i katastru nekretnina (»Narodne novine« broj 16/2007), Vlada Republike Hrvatske je na sjednici održanoj 19. kolovoza 2010. godine donijela

ODLUKU

O UTVRĐIVANJU KRITERIJA I NORMI RAZMJENE PODATAKA

I.

Ovom Odlukom propisuju se kriteriji i norme razmjene podataka (skupova prostornih podataka) subjekata Nacionalne infrastrukture prostornih podataka »Provedba pravila za metapodatke«.

II.

Sastavni dio ove Odluke su »Provedbena pravila za metapodatke«.

III.

Ova Odluka stupa na snagu osmoga dana od dana objave u »Narodnim novinama«.

Klasa: 930-01/10-01/02

Ubroj: 5030120-10-1

Zagreb, 19. kolovoza 2010.

Predsjednica
Jadranka Kosor, dipl. in.

PROVEDBENA PRAVILA ZA METAPODATKE

DIO A
Tumačenje

1. Primjenjuju se sljedeće definicije:

- »znakova« označava polje vrijednosti elemenata metapodataka izraženi kroz znakove koji se netisuju kao cijelina,
- »slobodan tekst« označava polje vrijednosti elemenata metapodataka izraženo jednom ili više živih jezika,

Nationala infrastruktura prostornih podataka

Specifikacija metapodataka Nacionalne infrastrukture prostornih podataka Hrvatske

Naslov:	Specifikacija metapodataka Nacionalne infrastrukture prostornih podataka Hrvatske		
Datum:	2011-11-28		
Tema:	NIPP metapodaci		
Status:	Verzija 1.0		
Iszravnjač:	Državne geodetske uprave		
Tip:	Tekst		
Opis:	Specifikacija metapodataka NIPP-a Hrvatske u skladu s EN ISO 19113 i EN ISO 19119, INSPIRE Metadata Implementing Rules (v.1.1) i Provedbenim pravilima za metapodatke (NN 102/2010)		
Format:	Portable document format (PDF)		
Dostupnost:	Javni dokument		
Oznaka:	NIPP_MP_v1_0_20111128		
Jezik:	hrv		
Povjerenice:	Direktiva 2007/2/EZ Europskoga parlamenta i Vijeća od 14. ožujka 2007. kojom se uspostavlja infrastruktura za prostorne informacije u Europskoj zajednici (INSPIRE), Zakon o državnoj izmjeni i katastru nekretnina (NN 16/2007, 124/2010), Provedbena pravila za metapodatke (NN 102/2010).		
Povijest:	Verzija	Datum	Promjena
1.0	28.11.2011.	-	

- Provedbena pravila za metapodatke, NN 102/2010

- Specifikacija metapodataka NIPP-a, DGU 28.11.2011

Croatian NSDI Metadata Profile

Metadata are made for resource types:

- spatial data sets,
- spatial data set series,
- services.
- National metadata profile contains metadata that should be implemented in the data that will be included in NSDI.
- National metadata profile could be used as fundament by development of metadata profiles of other thematic data sets.
- Too many metadata could demand new data collections and additional costs.
- Too few metadata could lead to not sufficient data description and problems during data discovery and use.

INSPIRE services

INSPIRE SERVICES	
discovery service (discovery)	Services making it possible to search for spatial data sets and services on the basis of the content of the corresponding metadata and to display the content of the metadata.
view service (view)	Service that makes it possible, as a minimum, to display, navigate, zoom in and out, pan or overlay viewable spatial data sets and to display legend information and any relevant content of metadata.
download service (download)	Service that enables copies of spatial data sets, or parts of such sets, to be downloaded and, where practicable, accessed directly.
transformation service (transformation)	Service that enables spatial data sets to be transformed with a view to achieving interoperability.
invoke spatial data service (invoke)	Service that allows defining both the data inputs and data outputs expected by the spatial service and a workflow or service chain combining multiple services. It also allows defining the external web service interface of the workflow or service chain.
other service (service)	The service is included in the classification of the spatial data service types, described in the metadata element "Spatial data service type".

Croatian NSDI Metadata Elements Definitions – part 1/2

Element name	Definition
1. IDENTIFICATION	
Resource title	This a characteristic, and often unique, name by which the resource is known.
Resource abstract	This is a brief narrative summary of the content of the resource.
Resource type	This is the type of resource being described by the metadata.
Resource locator	The resource locator defines the link(s) to the resource and/or the link to additional information about the resource.
Unique resource identifier	A value uniquely identifying the resource.
Coupled resource	If the resource is a spatial data service, this metadata element identifies, where relevant, the target spatial data set(s) of the service through their unique resource identifiers (URI).
Resource language	The language(s) used within the resource.
2. SPATIAL DATA AND SERVICES CLASSIFICATION	
Topic category	The topic category is a high-level classification scheme to assist in the grouping and topic-based search of available spatial data resources.
Spatial data services	Services of spatial data.
3. KEYWORDS	
Keyword value	The keyword value is a commonly used word, formalized word or phrase used to describe the subject.
Originating controlled vocabulary	The name of a formally registered thesaurus or a similar authoritative source of keywords.
4. GEOGRAPHIC BOUNDING BOX	
Geographic bounding box	This is the extent of the resource in the geographic space. The extent shall be expressed by westbound and eastbound longitudes, and southbound and northbound latitudes in decimal degrees, with a precision of at least two decimals.
5. TEMPORAL REFERENCE	
Temporal extent	The temporal extent defines the time period covered by the content of the resource.
Reference date	A reference date for the resource being described.
Frequency of update	Frequency with which modifications are made to the resource
Date of creation	Date of creation of the source.

Croatian NSDI Metadata Elements Definitions – part 2/2

Element name	Definition
6. QUALITY	
Lineage	This is a statement on process history and/or overall quality of the spatial data set.
Spatial resolution	Spatial resolution refers to the level of detail of the data set.
7. CONFORMITY	
Conformity – specification	The degree of conformity with the product specification or user requirement against which the data is being evaluated.
Conformity – degree	The degree of conformity with the product specification or user requirement against which the data is being evaluated. The degree is the indication of the conformance result.
8. CONDITIONS APPLYING TO ACCESS AND USE	
Conditions applying to access and use	Defines the conditions for access and use of spatial data sets and services.
Limitations on public access	Provides information on the type and the reasons for limited public access to spatial data sets and spatial data services.
9. RESPONSIBLE PARTY	
Responsible party	This is the description of the organization responsible for the establishment, management, maintenance and distribution of the resource.
Responsible party role	This is the role of the responsible organization.
10. METADATA ABOUT METADATA	
Metadata point of contact	This is the description of the organization responsible for the creation and maintenance of the metadata.
Metadata date	The date which specifies when the metadata record was created or updated.
Metadata language	This is the language in which the metadata elements are expressed.

Elements of the Croatian NSDI metadata profile

Spatial data sets and series

Ime elementa (Element name)	Obli-gation	Cardi-nality
Ime izvora (Resource title)	M	1
Sažetak o izvoru (Resource abstract)	M	1
Vrsta izvora (Resource type)	M	1
Adresa izvora podataka (Resource locator)	C	N
Jedinstvena oznaka izvora (Unique resource identifier)	M	1
Prostorni referentni sustav (Spatial reference system)	M	1
Format podataka (Data format)	M	N
Učestalost ažuriranja (Frequency of update)	M	1
Jezik izvora (Resource language)	C	N
Tematska kategorija (Topic category)	M	N
Ključna riječ (Keyword)	M	N
Geografski granični pravokutnik – zapad (West bound longitude)	M	N
Geografski granični pravokutnik – istok (East bound longitude)	M	N
Geografski granični pravokutnik - jug (South bound latitude)	M	N
Geografski granični pravokutnik - sjever (North bound latitude)	M	N
Vremenski obuhvat (Temporal extent)	M	1
Datum objave (Reference date)	M	N
Podrijetlo (Lineage)	M	1
Prostorna rezolucija – udaljenost (Spatial Resolution – distance)	C	1
Prostorna rezolucija - ekvivalentno mjerilo (Spatial Resolution – equivalent scale)	C	1
Sukladnost (Conformity)	M	N
Uvjeti za pristup i korištenje (Conditions for access and use)	M	N
Ograničenja javnog pristupa (Limitations on public access)	M	N
Odgovorna organizacija (Responsible party)	M	N
Uloga odgovorne organizacije (Responsible party role)	M	N
Kontaktna točka za metapodatke (Metadata point of contact)	M	N
Datum metapodataka (Metadata date)	M	1
Jezik metapodataka (Metadata language)	M	1
Vrsta usluga prostornih podataka (Spatial data service type)	M	1
Upareni (kombinirani) izvori (Coupled Resource)	C	N

Spatial data services

Ime elementa (Element name)	Obli-gation	Cardina-lity
Ime izvora (Resource title)	M	1
Sažetak o izvoru (Resource abstract)	M	1
Vrsta izvora (Resource type)	M	1
Adresa izvora podataka (Resource locator)	C	N
Prostorni referentni sustav (Spatial reference system)	C	1
Ključna riječ (Keyword)	M	N
Geografski granični pravokutnik – zapad (West bound longitude)	M	N
Geografski granični pravokutnik – istok (East bound longitude)	M	N
Geografski granični pravokutnik - jug (South bound latitude)	M	N
Geografski granični pravokutnik - sjever (North bound latitude)	M	N
Vremenski obuhvat (Temporal extent)	C	1
Datum objave (Reference date)	M	N
Podrijetlo (Lineage)	M	1
Prostorna rezolucija – udaljenost (Spatial Resolution – distance)	C	1
Prostorna rezolucija - ekvivalentno mjerilo (Spatial Resolution – equivalent scale)	C	1
Sukladnost (Conformity)	M	N
Uvjeti za pristup i korištenje (Conditions for access and use)	M	N
Ograničenja javnog pristupa (Limitations on public access)	M	N
Odgovorna organizacija (Responsible party)	M	N
Kontaktna točka za metapodatke (Metadata point of contact)	M	N
Datum metapodataka (Metadata date)	M	1
Jezik metapodataka (Metadata language)	M	1
Vrsta usluga prostornih podataka (Spatial data service type)	M	1
Upareni (kombinirani) izvori (Coupled Resource)	C	N

METADATA ELEMENTS

Element number	the consecutive number of the element
Element name	the name of the element
Element definition	a formal definition of the element
INSPIRE equivalent	if applicable the corresponding INSPIRE metadata element is named by number and name
Comparison with INSPIRE	indicates if elements are equal or different in comparison with INSPIRE
ISO 19115/9 equivalent	the corresponding ISO 19115 or ISO 19119 element is named
Comparison with ISO	indicates if elements are equal or different in comparison with ISO 19115/19
XPath	an XPath expression indicating the metadata element within the ISO 19115 / ISO 19119 UML model
Obligation	whether the element is mandatory or conditional
Cardinality	whether the element is single-valued or can have multiple values
Data type	the data type of the entry (character string, number, Boolean or other)
Domain	the allowable set of values
Example	a common example for the element value(s)
Implementation instructions	any comment or hint that shall be considered when implementing this element

Metadata XML Schema

- More ISO 19139 Metadata XML Schemas are available (ISO, OGC, EDEN...)
- EDEN (l'Equipe D'Experts en Normalisation): collaborative standardization working space in the field of spatial data
<http://eden.ign.fr/welcome>
- Advantage of the EDEN XML Schema:
 - consistent XSD schema,
 - GML 3.2.1 support,
 - Service metadata are included
- EDEN Metadata XML Schemas are available on:
<http://eden.ign.fr/xsd/isotc211/isofull/20090316>
 - EDEN Data set XML Schema: gmd/gmd.xsd,
 - EDEN Service XML Schema: srv/srv.xsd.

Metadata Comparison

Conclusions

- Every data resource should have associated metadata.
- Metadata should be keep up to date.
- Metadata are basis of the NSDI.
- Metadata are the fundamental elements needed to discover, access, and use geographic data.
- INSPIRE Discovery service is based on Metadata.
